## SAOS Dashboard Fixes — 2026-06-29

### Fixes Applied (5 Total)

### ✅ Fix 1: n8n Email Dispatcher Port (8768 → 8765)

**File:** `n8n-email-dispatcher.json` - Changed `Fetch Pending Notifications` URL from `localhost:8768` to `localhost:8765` - Changed `Send iMessage Fallback` URL from `localhost:8768` to `localhost:8765` - **Status:** JSON updated, needs import into n8n UI

### ✅ Fix 2: Services Tab — Dynamic (was Hardcoded)

**Files:** `api.py`, `index.html` - Created `TIER_SERVICES`, `TIER_INFRA`, `TIER_SUPPORT` dictionaries in `api.py` (moved from JS) - Created `/api/portal/services` endpoint — returns services based on client tier - Updated `loadServices()` to fetch from API instead of hardcoded JS - Removed `getServicesForTier()`, `getInfraForTier()`, `getSupportForTier()` from `index.html` - **Impact:** Service changes now require only editing `api.py` (single source of truth)

### ✅ Fix 3: Activity Tab — Real Activity Log (was Duplicating Tasks)

**File:** `api.py`, `index.html` - Created `/api/portal/activity` endpoint that returns: - Task lifecycle events (created, started, completed, failed) - Deliverable uploads with download links - Updated `loadActivity()` to show real events with icons and timestamps - **Impact:** Activity tab now shows meaningful audit trail, not just task list

### ✅ Fix 4: Agent Heartbeat Visibility

**File:** `index.html` - Updated `loadDashboard()` agent cards to show `last_heartbeat` - Shows “💖 Active • 2m ago” or “⚠️ Stale • 1h ago” per agent - Agents without heartbeat in 5+ minutes marked as stale (red) - **Impact:** Clients can see which agents are actually responsive

### ✅ Fix 5: API Error Fallback UI

**File:** `index.html` - Updated `api()` function with try/catch — returns `{_apiError: true, message}` on failure - Added `errorFallback()` helper that renders retry UI - Added error handling to: `loadDashboard()`, `loadServices()`, `loadTasks()`, `loadActivity()`, `loadLiveOps()` - **Impact:** Dashboard shows “Service Temporarily Unavailable” with retry button instead of blank screen

## Files Changed

| FILE                                   | LINES CHANGED           |
|----------------------------------------|-------------------------|
| <code>api.py</code>                    | +262 lines              |
| <code>index.html</code>                | +274 lines / -deletions |
| <code>n8n-email-dispatcher.json</code> | 4 lines (port numbers)  |

## Verification Commands

```
# Check Python syntax
cd ~/.openclaw/workspaces/sol/Systack/content/saos/saos-data/customer-dashboard
python3 -c "import ast; ast.parse(open('api.py').read()); print('OK!')"
```

# Restart dashboard to pick up changes

```
launchctl unload ~/Library/LaunchAgents/net.systack.customer-dashboard.plist  
launchctl load ~/Library/LaunchAgents/net.systack.customer-dashboard.plist
```

## Next Step

Import the updated `n8n-email-dispatcher.json` into n8n: 1. Open n8n UI (<http://localhost:5678>) 2. Workflows → SAOS Email Notification Dispatcher 3. Settings → Import from File → Select `n8n-email-dispatcher.json` 4. Activate workflow
