

Phillip Lowe AI Systems Evaluator | Automation Engineer | Full-Stack Builder 

plowe95@yahoo.com |  (501) 274-6231 |  systack.net |  Central Arkansas (Remote)

SUMMARY

Self-taught systems engineer with 2+ years of production-grade automation, API development, and AI agent orchestration. Built a multi-tier SaaS platform (SAOS) with Stripe billing, real-time dashboards, and multi-agent AI systems — while working full-time warehouse shifts. Experienced in evaluating AI outputs, designing evaluation rubrics, and debugging complex agent traces. Seeking remote AI training/evaluation roles where technical judgment and systems thinking drive model improvement.

CORE COMPETENCIES

AI & Agent Systems - Multi-agent orchestration (OpenClaw, Ollama, 10-agent fleet) - AI output evaluation and quality scoring - Prompt engineering and rubric design - RAG (Retrieval-Augmented Generation) with pgvector - Local LLM deployment and optimization

Backend & APIs - Python (Flask, SQLite, Postgres, webhook handling) - REST API design and documentation - Database architecture (SQLite, Postgres with pgvector) - Stripe integration (billing, webhooks, product catalog) - n8n workflow automation (60+ workflows in production)

Frontend & Web - HTML/CSS/JavaScript (vanilla, no frameworks) - Real-time dashboards with live data polling - Mobile-responsive UI design - Static site deployment (GitHub Pages, Cloudflare)

Systems & DevOps - VPS provisioning and deployment (Vultr, Tailscale) - Docker basics, Git/GitHub, cron scheduling - macOS automation and shell scripting - Security: PIN auth, session tokens, reverse proxy config

PROJECT PORTFOLIO

SAOS (Systack Automation Operating System)

Founder & Lead Engineer — 2024–Present

- **Product:** Multi-tier SaaS dashboard for AI-powered business automation
- **Architecture:** Flask API (port 8768) + vanilla JS frontend (3,682 lines), SQLite/Postgres
- **Features:**
 - Real-time agent status monitoring with live polling
 - 14 REST API endpoints: auth, tasks, services, activity, deliverables, exports
 - Stripe billing integration (\$149–\$799/mo tiers) with webhook handling
 - File upload/download system with deliverable storage
 - Mobile-responsive with onboarding tour and hamburger navigation
 - n8n email dispatcher workflow (60s polling, SMTP integration)
- **AI Integration:** Spawn/manage 10 specialized agents (SOL, DOOBY, LOKI, etc.) via OpenClaw
- **Docs:** Generated 5 PDF guides (Quick Start, User Guide, Service Manual, Architecture, Mobile Access)

Utopia Deli Ordering System

Automation Engineer — 2024–2025

- Built end-to-end food ordering pipeline: HTML form → n8n → Square payment → confirmation email
- Fixed critical pricing bug (double-charging combo modifiers) by centralizing pricing authority in backend
- Integrated with Square API for payment link generation and order tracking
- Deployed at utopia-deli.systack.net (live client)

Invoice Parser API

Solo Build — 2024

- Python FastAPI service for PDF invoice extraction
- n8n workflow: email trigger → save PDF → call parser → log to Postgres → notify stakeholder
- Deployed and tested with real business invoices

Lead Scraper & Cold Outreach Engine

Automation Engineer — 2024

- Automated prospect identification via web scraping
- n8n workflows for lead scoring, CRM insertion, and personalized email dispatch
- Integrated with Gmail/Outlook APIs for deliverability tracking

EXPERIENCE

Warehouse Operations

12 Years — Multi-site logistics (picking, routing, inventory, team lead)

- Developed systems-thinking mindset by identifying manual inefficiencies and designing automations to eliminate them
- Trained new hires, maintained safety standards, worked with WMS and RF scanners
- **Key insight:** The same process optimization skills scale from warehouse floors to software systems

Audio Engineering

Degree/Certification — Studio recording, mixing, live sound

- Creative background in rap/hip-hop performance and production
- Developed ear for quality evaluation and attention to sonic detail

WHAT MAKES ME EFFECTIVE AT AI EVALUATION

- **Systems thinker:** Can trace how a broken sub-component cascades through an entire agent pipeline
- **Builder's judgment:** I don't just evaluate outputs — I understand the architecture that produced them
- **Rubric discipline:** Built evaluation frameworks for agent task routing, trust scoring, and quality gates
- **Documentation rigor:** Created 6 technical manuals and API docs for SAOS — clear explanations are second nature
- **Hybrid perspective:** Can evaluate code quality, UI/UX, business logic, and AI behavior in a single pass

TOOLS I USE DAILY

Python | JavaScript | n8n | OpenClaw | Ollama | SQLite | Postgres | Git | Tailscale | Cloudflare | VS Code

AVAILABILITY

- Fully remote, flexible schedule (available nights/weekends, CST timezone)
- MacBook Air M2 (16GB), reliable internet
- Comfortable with async communication and independent work

“I don’t just evaluate AI outputs — I understand the systems that produce them, because I build those systems every day.”
