1. Scoring Formula

$Total\ Score = (GuestCountScore \times 0.40) + (DateProximityScore \times 0.30) + (ServiceTypeScore \times 0.20) + (BookingLeadTimeScore \times 0.10)$

Range: 0–100

Rounding: Nearest integer

2. Factor Definitions

Factor 1: Guest Count (Weight: 40%)

GUEST COUNT	POINTS	RATIONALE
> 100	100	Large event — high revenue potential
50–100	65	Medium event — solid opportunity
< 50	30	Small event — lower priority

Default: 30 (if guest count not provided)

Factor 2: Date Proximity (Weight: 30%)

TIME UNTIL EVENT	POINTS	RATIONALE
< 2 weeks	100	Urgent — needs immediate response

TIME UNTIL EVENT	POINTS	RATIONALE
2–4 weeks	65	Moderate urgency
> 4 weeks	30	Planning ahead — lower urgency

Default: 30 (if event date not provided)

Factor 3: Service Type (Weight: 20%)

SERVICE TYPE	POINTS	RATIONALE
Full Service	100	Higher value, more complex
Drop-off Only	30	Lower value, simpler

Default: 30 (if service type not specified)

Factor 4: Budget Mentioned (Weight: 10%)

BUDGET PROVIDED	POINTS	RATIONALE
Yes (budget > \$0)	100	Customer is serious, has funding
No / Not provided	0	Less qualified

Default: 0

3. Score Thresholds

SCORE RANGE	CATEGORY	RESPONSE TYPE
80–100	High	Detailed quote + calendar link + priority follow-up
50–79	Medium	Standard info + follow-up offer
0–49	Low	Basic info + “reach out when plans firm up”

4. Example Calculations

Example 1: Corporate Lunch (High Score)

FACTOR	VALUE	RAW POINTS	WEIGHTED
Guest Count	120	100	40.0
Date Proximity	10 days	100	30.0
Service Type	Full Service	100	20.0

FACTOR	VALUE	RAW POINTS	WEIGHTED
Budget	\$3,500	100	10.0
Total			100

Category: High — Send detailed quote immediately.

Example 2: Birthday Party (Medium Score)

FACTOR	VALUE	RAW POINTS	WEIGHTED
Guest Count	60	65	26.0
Date Proximity	21 days	65	19.5
Service Type	Drop-off	30	6.0
Budget	Not provided	0	0.0
Total			52

Category: Medium — Send standard info with follow-up offer.

Example 3: Small Gathering (Low Score)

FACTOR	VALUE	RAW POINTS	WEIGHTED
Guest Count	20	30	12.0
Date Proximity	45 days	30	9.0
Service Type	Drop-off	30	6.0
Budget	Not provided	0	0.0
Total			27

Category: Low — Send basic info.

5. Implementation (n8n Code Node)

```
const guestCount = $json.guest_count || 0;
const eventDate = new Date($json.event_date);
const now = new Date();
const daysUntil = Math.ceil((eventDate - now) / (1000 * 60 * 60 * 24));
const serviceType = $json.service_type || 'drop-off';
const hasBudget = $json.budget && $json.budget > 0;

// Guest count score
let guestScore = 30;
if (guestCount > 100) guestScore = 100;
else if (guestCount >= 50) guestScore = 65;
```

```

// Date proximity score
let dateScore = 30;
if (daysUntil <= 14) dateScore = 100;
else if (daysUntil <= 28) dateScore = 65;

// Service type score
let serviceScore = serviceType === 'full-service' ? 100 : 30;

// Budget bonus
let budgetScore = hasBudget ? 100 : 0;

// Weighted total
const totalScore = Math.round(
  (guestScore * 0.40) + (dateScore * 0.30) + (serviceScore * 0.20) + (budgetScore * 0.10)
);

return [{
  json: {
    ...$json,
    lead_score: totalScore,
    lead_category: totalScore >= 80 ? 'high' : totalScore >= 50 ? 'medium' : 'low',
    scoring_breakdown: {
      guest_count: { value: guestCount, score: guestScore, weighted: guestScore * 0.40 },
      date_proximity: { days: daysUntil, score: dateScore, weighted: dateScore * 0.30 },
      service_type: { type: serviceType, score: serviceScore, weighted: serviceScore * 0.20 },
      budget: { provided: hasBudget, score: budgetScore, weighted: budgetScore * 0.10 }
    }
  }
}];

```

6. Tuning Guidelines

When to Adjust Weights

SYMPTOM	POSSIBLE FIX
Too many “High” scores	Raise high threshold to 85
Too few “High” scores	Lower high threshold to 75
Small events scoring too high	Reduce guest count weight
Far-out events scoring too high	Reduce date proximity weight
Budget not differentiating enough	Increase budget weight

Adjustment Process

1. Review 2–4 weeks of scored leads
2. Compare scores against actual conversion outcomes
3. Adjust one weight at a time
4. Monitor for 2 weeks before further changes
5. Document all changes in this file

7. Version History

VERSION	DATE	CHANGE
1.0	2026-06-08	Initial scoring algorithm deployed
1.0	2026-06-16	Documented (this file)
