1. Overview

The Systack Invoice Parser automatically extracts structured data from PDF invoices. Forward any invoice PDF by email, and within seconds you receive a summary with vendor name, line items, totals, and tax — all logged to your database.

No manual data entry. No cloud processing. Everything runs locally.

2. How the System Works

Step 1 — Forward an Invoice

Forward any PDF invoice to your configured invoice email address. The system monitors this inbox for new messages with PDF attachments.

Step 2 — Automatic Extraction

The system:

- Detects the PDF attachment
- Identifies the vendor from the document content
- Extracts: vendor name, invoice number, date, line items, subtotal, tax, total
- Falls back to OCR for scanned or image-based PDFs

Step 3 — Structured Data

The extracted data is returned as structured JSON:

```
{
  "vendor": "AT&T",
  "invoice_number": "12345",
  "date": "2026-06-01",
  "line_items": [
    {"name": "Wireless Plan", "qty": 1, "price": 85.00, "total": 85.00},
    {"name": "Device Payment", "qty": 1, "price": 15.00, "total": 15.00}
  ],
  "subtotal": 100.00,
  "tax": 8.50,
  "total": 108.50
}
```

Step 4 — Database Logging

All extracted invoices are stored in a PostgreSQL database for:

- Historical reference
- Monthly spending reports
- Vendor cost tracking
- Tax preparation

Step 5 — Summary Notification

You receive an email summary:

```
New invoice processed:
Vendor: AT&T
Invoice #: 12345
Date: 2026-06-01
Total: $108.50
```

3. What You See

Summary Email

Example:

```
INVOICE PROCESSED
Vendor: AT&T
Invoice #: 12345
Date: June 1, 2026
Items:
• Wireless Plan — $85.00
• Device Payment — $15.00
Subtotal: $100.00
Tax: $8.50
Total: $108.50
```

API Demo Page

URL: <https://systack.net/services/invoice-extractor.html>

Upload any PDF invoice to see extraction results in real time.

4. Supported Vendors

The system recognizes 9+ vendor formats out of the box:

- AT&T
- Verizon
- Utility providers
- Wholesale suppliers
- Service providers
- And more

For unrecognized formats, the system uses OCR to extract what it can. New vendor formats can be added on request.

5. Key Benefits

- **Zero manual data entry** — forward and forget
 - **100% local processing** — no cloud, no data sharing
 - **9+ vendor formats** — covers most common invoices
 - **OCR fallback** — handles scanned and image-based PDFs
 - **Database logging** — complete invoice history
 - **Under 60 seconds** — from forward to summary
-

6. Common Questions

What if the invoice format isn't recognized?

The system falls back to OCR (optical character recognition) to extract whatever data it can find. Results may be less precise than format-matched extraction.

Can I add support for my vendors?

Yes — contact Systack with sample invoices. New vendor formats can be added to the parser.

Where is my invoice data stored?

In a local PostgreSQL database. Data never leaves your infrastructure.

What if the PDF is password-protected?

Password-protected PDFs cannot be processed. Remove the password and forward again.

What if I forward multiple invoices at once?

The system processes the first PDF attachment. Forward invoices one at a time for best results.

7. Troubleshooting

No summary email received

- Check the email was forwarded to the correct address
 - Verify the email had a PDF attachment
 - Check spam folder for summary emails
 - Contact Systack if persistent
-

Invoice data looks wrong

- The vendor format may not be fully supported
 - Try the API demo page to see raw extraction
 - Report issues with sample invoice to Systack
-

“No attachment found” error

- Ensure the PDF is attached directly (not linked)
 - Check the attachment is a .pdf file
 - Forwarded emails with nested attachments may need to be sent directly
-

8. Support

CHANNEL	DETAIL
Email	support@systack.net
Phone	(501) 274-6231
Demo	https://systack.net/services/invoice-extractor.html

9. Summary

The Systack Invoice Parser provides:

- Automatic PDF invoice data extraction
- 9+ vendor format support with OCR fallback
- Local database logging for complete history

- Email summary notifications
- Zero manual data entry

Forward an invoice. Get structured data. Done.
