Invoice Parser — Documentation

Automation ID: `invoice-parser`**Version:** 2.0**Status:** `live` — needs full documentation**Built:** 2026-06-08 (parser API), 2026-06-10 (email pipeline)**Last Updated:** 2026-06-11**Owner:** Systack (internal + client service)**Builder:** SOL

1. Executive Summary

What It Does

Automated invoice processing: forward any PDF invoice to our system, extract structured data (vendor, line items, totals, tax), log to database, send summary email. Handles 9+ vendor formats + OCR for scanned PDFs.

Business Value

METRIC	BEFORE	AFTER
Processing time	5-10 min/manual	< 60 seconds
Data entry errors	Common	Eliminated
Format support	1-2 vendors	9+ vendors + OCR
Data security	Cloud processing	100% local

URLs

- API: <https://invoices.systack.net/extract>
- Demo: <https://systack.net/services/invoice-extractor.html>

2. System Architecture

Flow Diagram

Components

COMPONENT	TECHNOLOGY	PURPOSE
Email Trigger	n8n IMAP	Captures invoice emails
PDF Extractor	Python + pytesseract	OCR if needed
Parser API	Python FastAPI	Structured extraction
Database	Postgres	Invoice storage
Notifier	n8n Email	Summary to owner

3. Technical Specifications

IMAP Configuration

SETTING	VALUE
Format	resolved (NOT shallow)
Download attachments	true
Binary key	attachment_0 (NOT attachment_)
IF node check	mimeType = application/pdf

API Endpoint

```
POST https://invoices.systack.net/extract
Content-Type: multipart/form-data
Body: file=@invoice.pdf
```

```
Response:
{
  "vendor": "AT&T",
  "invoice_number": "12345",
  "date": "2026-06-01",
  "line_items": [...],
  "subtotal": 100.00,
  "tax": 8.50,
  "total": 108.50,
  "email_subject": "Invoice Summary",
  "email_html": "<table>...</table>"
}
```

n8n Workflow

- **ID:** Ny4kzzf1bN4N0DGn
- **Name:** “Systack Private — Invoice Email Pipeline”
- **Status:** ACTIVE in database

4. Configuration

Credentials

CREDENTIAL	ID	PURPOSE
IMAP	uZXvyt7Wd0RbQreY	Read invoice emails
SMTP	jL1iF7fhyhTe5tCp	Send summaries
Postgres	iVuy7e5WTC05Hqwe	Store data

Email Subject Parsing

- Trigger on: invoices@, bills@, or specific vendor addresses
- Ignore: newsletters, ads, personal email

5. Operational Runbook

Daily Checks

- ☐ Invoices processed in last 24h
- ☐ API response time < 30s
- ☐ No failed extractions
- ☐ Summary emails sent

Monitoring

METRIC	EXPECTED	ALERT IF
Extraction success rate	> 95%	< 90%
API response time	< 30s	> 60s
OCR fallback rate	< 20%	> 40%
Email delivery	> 98%	< 95%

Failure Scenarios

SCENARIO	RESPONSE
IMAP credential expired	Check Gmail app password (may be revoked by Google)
PDF unreadable	Log for manual review, notify owner
API down	Queue for retry, alert Systack

6. Build Log

Phase 1: Parser API (2026-06-08)

- Built Python API with 9 format handlers
- Added Tesseract OCR for scanned PDFs
- Tested with real AT&T phone bill

Phase 2: Email Pipeline (2026-06-10)

- Fixed IMAP format to `resolved`
- Fixed binary key to `attachment_0`
- Fixed IF node to check mimeType
- Built summary email template
- Renamed from deli-specific to generic pipeline

7. Known Issues

- Gmail app passwords revoked silently** — check credential status regularly

2. **Multiple attachments** — currently assumes single attachment
 3. **Forwarded emails** — may have nested MIME structure
-

Appendix: Quick Reference

```
START:    Verify IMAP credential + API health
STOP:     Disable IMAP trigger in n8n
CHECK:    Last invoice processed timestamp
FIX:      If no invoices → check IMAP credential status
ESCALATE: If API returning errors → check parser logs
```
