Systack — Invoice Parser

Internal Implementation Guide

Document ID: SY-IP-IMPL-001

Version: 1.0

Status: Internal — Systack Only

Source System: Systack Invoice Pipeline (Live since 2026-06-10)

Date: 2026-06-16

Builder: SOL / Assembly

Brand Reference

1. System Architecture

```
Email with PDF arrives
  → IMAP Trigger (format=resolved)
  → Extract PDF Attachment
  → Save PDF to disk
    → Call Invoice Parser API
      → API returns structured JSON
        → Log to Postgres
          → Send Summary Email
```

2. Core Components

IMAP Email Trigger

SETTING	VALUE	NOTES
Format	resolved	⚠ NOT shallow — shallow drops attachments
Download attachments	true	Required
Binary key	attachment_0	⚠ NOT attachment_ — wrong key = no file
IF node check	mimeType = application/pdf	⚠ Check MIME type, NOT filename

Invoice Parser API

- **URL:** `https://invoices.systack.net/extract`
 - **Method:** POST (multipart/form-data)
 - **Body:** `file=@invoice.pdf`
 - **Response:** Structured JSON (vendor, items, totals)
-

Database

- **Type:** PostgreSQL
 - **Credential ID:** `iVuy7e5WTC05Hqwe`
 - **Stores:** All extracted invoice data
-

n8n Workflow

- **ID:** `Ny4kzzf1bN4N0DGn`
 - **Name:** “Systack Private — Invoice Email Pipeline”
 - **Status:** ACTIVE
-

3. Setup Process (Replication)

Step 1 — Configure IMAP

1. Create Gmail app password (or use existing)
 2. Configure n8n IMAP credential:
 - **Format:** `resolved`
 - **Download attachments:** `true`
 3. Set trigger to monitor specific inbox
-

Step 2 — Deploy Parser API

- Python FastAPI application
 - 9 vendor format handlers
 - Tesseract OCR for scanned PDFs
 - Deploy to `invoices.systack.net/extract`
-

Step 3 — Configure n8n Workflow

Key nodes:

#	NODE	CRITICAL CONFIG
1	IMAP Trigger	Format: <code>resolved</code>
2	IF (mimeType)	Check <code>application/pdf</code>

#	NODE	CRITICAL CONFIG
3	Extract Attachment	Binary key: <code>attachment_0</code>
4	HTTP Request	POST to parser API
5	Postgres Insert	Log extracted data
6	Email Send	Summary to owner

Step 4 — Set Up Postgres

- Create `invoices` table
- Configure n8n Postgres credential
- Test insert with sample extraction

Step 5 — Configure Summary Email

- SMTP credential for sending
- Template: vendor, invoice #, date, items, totals
- Recipient: business owner or finance email

4. Critical Constraints

CONSTRAINT	DETAIL	CONSEQUENCE IF VIOLATED
IMAP format	MUST be <code>resolved</code>	Attachments not downloaded
Binary key	MUST be <code>attachment_0</code>	File not found, API call fails
MIME check	Check <code>mimeType</code> , NOT filename	Non-PDF files processed, errors
Gmail passwords	May be revoked silently	IMAP stops working, no invoices processed

5. Configuration Requirements

Credentials

CREDENTIAL	ID	PURPOSE
IMAP	<code>uZXvyt7Wd0RbQreY</code>	Read invoice emails
SMTP	<code>jL1iF7fhyhTe5tCp</code>	Send summaries
Postgres	<code>iVuy7e5WTC05Hqwe</code>	Store invoice data

6. Testing Procedure

STEP	ACTION	VERIFY
1	Forward test invoice PDF	IMAP trigger fires
2	Check attachment extracted	Binary key correct
3	Check API response	Structured JSON returned
4	Check Postgres	Row inserted
5	Check summary email	Delivered to owner

7. Maintenance

- Monitor IMAP credential status (Gmail may revoke)
- Check API response times (< 30s target)
- Review extraction success rate (> 95% target)
- Add new vendor formats as needed

8. Known Issues

ISSUE	SYMPTOM	FIX
Gmail password revoked	IMAP stops	Regenerate app password
Multiple attachments	Only first processed	Forward one invoice at a time
Forwarded emails	Nested MIME structure	Send directly when possible
Password-protected PDF	Extraction fails	Remove password, resend
