No-Show Prevention System — Documentation

Automation ID: noshow-prevention

Version: 1.0

Status: building (was partial — completing now)

Built: 2026-06-03 (deposit logic), completing 2026-06-11

Last Updated: 2026-06-11

Owner: Utopia Deli (template for all clients)

Builder: SOL

1. Executive Summary

What It Does

Eliminates revenue loss from no-shows by requiring deposits at booking and sending automated reminders with confirmation requirements. If a customer doesn't confirm, their slot is automatically released for resale.

Business Value

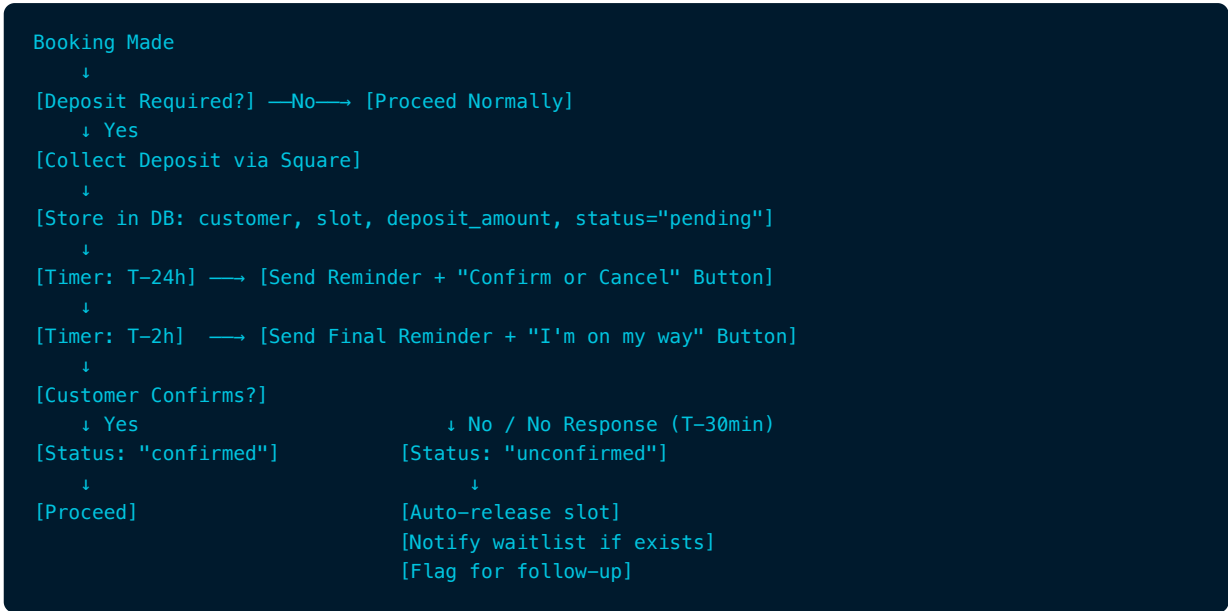

METRIC	BEFORE	AFTER (TARGET)
No-show rate	~15-20%	< 5%
Revenue lost to no-shows	~\$500-1000/mo	< \$100/mo
Staff idle time	2-3 hrs/day	< 30 min/day

ROI Estimate

- Time saved: 5-10 hrs/week (fewer last-minute scrambles)
- Revenue protected: \$400-900/month
- Payback period: Immediate (deposit covers implementation cost)

2. System Architecture

Flow Diagram

Components

COMPONENT	TECHNOLOGY	PURPOSE
Booking Trigger	n8n Webhook	Captures new booking
Deposit Collection	Square API	Holds deposit amount
Database	SQLite / Postgres	Stores booking state
Reminder Engine	n8n Timer + Email	Sends timed reminders
Confirmation Handler	n8n Webhook	Processes confirm/cancel
Slot Manager	n8n Code Node	Releases unconfirmed slots

Data Flow

- 1. Booking captured → deposit calculated → payment link sent
- 2. Payment confirmed → booking stored with “pending” status
- 3. T-24h: reminder email with confirm/cancel buttons
- 4. T-2h: final reminder with “I’m on my way” button
- 5. T-30min: check confirmation status
- 6. Confirmed → proceed | Unconfirmed → release slot + notify

3. Technical Specifications

Triggers

TRIGGER	TYPE	SCHEDULE/CONDITION
New Booking	Webhook	POST /webhook/booking-created
Confirmation Click	Webhook	GET /confirm?token={token}
Cancellation Click	Webhook	GET /cancel?token={token}
“On My Way” Click	Webhook	GET /omw?token={token}
Timer T-24h	Cron	0 9 * * * (9 AM day before)
Timer T-2h	Cron	Custom per-booking
Auto-release	Cron	T-30min per booking

Inputs

FIELD	TYPE	REQUIRED	SOURCE
booking_id	string	Yes	Booking system
customer_email	string	Yes	Booking form
customer_phone	string	No	Booking form
service_type	string	Yes	Booking form
slot_datetime	ISO datetime	Yes	Booking system
deposit_amount	cents	Yes	Config (e.g., \$20 = 2000)
total_value	cents	Yes	Booking system

Outputs

DESTINATION	FORMAT	FREQUENCY
Customer Email	HTML	Per reminder event
Internal Alert	Text/Email	Per no-show risk
Google Sheet	Row	Per booking

DESTINATION	FORMAT	FREQUENCY
Square	Transaction	Per deposit

Dependencies

SYSTEM	VERSION	CREDENTIAL ID
n8n	1.50+	—
Square	API v2	square_deposit_cred
Gmail/SMTP	IMAP/SMTP	gmail_app_password
SQLite	3.x	Local file

4. Configuration

Environment Variables

VARIABLE	DESCRIPTION	DEFAULT
NOSHOW_DEPOSIT_PERCENT	Deposit as % of total	25
NOSHOW_MIN_DEPOSIT	Minimum deposit in cents	1000 (\$10)
NOSHOW_REMINDER_24H	Enable 24h reminder	true
NOSHOW_REMINDER_2H	Enable 2h reminder	true
NOSHOW_AUTO_RELEASE	Auto-release unconfirmed	true
NOSHOW_RELEASE_BUFFER	Minutes before slot to release	30

Deposit Rules

SERVICE VALUE	DEPOSIT %	MIN DEPOSIT	MAX DEPOSIT
< \$50	100%	\$10	\$50
\$50-\$150	50%	\$20	\$75
> \$150	25%	\$37.50	No max

Retry Policy

CONDITION	ACTION	MAX ATTEMPTS
Email bounce	Retry with backup SMTP	3
Square API fail	Exponential backoff (1m, 5m, 15m)	5
Webhook timeout	Retry immediate	3
DB write fail	Alert + queue for retry	5

5. Operational Runbook

Startup / Shutdown

- **Activate:** Enable webhook in n8n, verify Square credential active, test reminder timers
- **Deactivate:** Disable webhook, pause reminder cron jobs, finish processing in-flight bookings
- **Emergency stop:** Disable webhook + pause all cron jobs → manual review of today's bookings

Daily Checks

- ☐ Yesterday's no-show rate < 5%
- ☐ Today's bookings all have deposit status
- ☐ Reminder emails sent successfully (check n8n execution log)
- ☐ Any unconfirmed bookings flagged for release

Monitoring

METRIC	EXPECTED	ALERT IF
Bookings/day	Varies	Sudden drop > 50%
Deposit collection rate	> 95%	< 90%
Confirmation rate	> 80%	< 70%
Auto-release rate	< 10%	> 20% (too aggressive)
Email delivery rate	> 98%	< 95%

Failure Scenarios

SCENARIO	SYMPTOM	RESPONSE
Square API down	Deposits fail	Switch to "pay at arrival" mode, alert manager
Email blocked	Reminders not sent	Check SMTP credential, switch to SMS if phone available
Customer clicks expired link	404 or "booking not found"	Redirect to "contact us" page, log for follow-up
Double-booking after release	Two customers same slot	Manual override, honor first confirmation, offer alternative

6. Build Log

Phase 1: Deposit Collection (2026-06-03)

- **Date:** 2026-06-03
- **What:** Square deposit integration at booking time
- **Blockers:** Square API credential setup
- **Decisions:** 25% deposit default, \$10 minimum

- **Status:** ✅ COMPLETE

Phase 2: Reminder System (2026-06-11 06:30)

- **Date:** 2026-06-11
- **What:** T-24h and T-2h reminders with confirm/cancel buttons
- **Completed:**
 - Database `systack_noshow` created
 - `bookings` table created with confirmation tracking
 - Postgres credential configured (localhost, trust auth)
 - Booking INSERT branch tested — data persisting
 - Confirmation branch tested — email delivered ✅
 - T-24h scheduler working ✅
 - T-2h scheduler working ✅
- **Next:** Build frontend + test/prod separation
- **Status:** 🚧 IN PROGRESS

Phase 3: Frontend + Test/Prod Architecture (2026-06-11 08:30)

- **Date:** 2026-06-11
- **What:** Build systack.net booking form with test/prod separation
- **Test DB:** `systack_test` created with matching schema
- **Test workflows:** `booking-website-demo` + `confirm-booking-website-demo` created
- **Pages needed:**
 - `/test-book` — test form (internal only)
 - `/book` — production form (customer-facing)
- **Status:** ⌚ QUEUED

Phase 3: Auto-Release + Waitlist (NEXT)

- **Date:** TBD
- **What:** Automatic slot release, waitlist notification
- **Blockers:** Need waitlist system built first
- **Status:** ⌚ QUEUED

7. Client Handoff

What the Client Sees

- Booking form with deposit notice: “A 25% deposit is required to hold your slot”
- Confirmation emails: “Your booking is confirmed. You’ll receive reminders 24h and 2h before.”
- Reminder emails with clear buttons: **[Confirm]** **[Cancel]** **[Reschedule]**

What They Need to Know

- Deposits are collected via Square (same system as regular payments)

- No-shows forfeit deposit (policy clearly stated at booking)
- Cancellations > 24h ahead get full deposit refund
- Cancellations < 24h forfeit deposit (or can reschedule)

What They Should NOT Touch

- n8n workflow configuration — any changes break reminders
- Square API credentials — managed by Systack
- Deposit percentages — changing without analysis affects conversion
- Email templates — changes may break formatting

Support Escalation

ISSUE	FIRST RESPONSE	ESCALATE TO
Deposits not collecting	Check Square dashboard	Systack — within 4h
Reminders not sending	Check n8n executions	Systack — within 4h
Customer complaints about deposits	Explain policy, offer credit	Systack if pattern emerges
Want to change deposit rules	Document request	Systack — next business day

8. Future Enhancements

PRIORITY	IDEA	EFFORT	IMPACT
P1	SMS reminders	Low	High
P2	Waitlist auto-fill	Medium	High
P3	Weather-based reminders	Medium	Medium
P4	“Running late” button (T-15min)	Low	Medium
P5	Deposit refund automation	Low	Medium
P6	No-show prediction ML	High	Medium

Source Code

- n8n workflow ID: `T0D0 – create in n8n`
- Frontend: `order.theutopiadeli.com/pickup-order/`
- API endpoint: `https://utopia-api.systack.net/webhook/...`

Test Data

```
{
  "booking_id": "test-001",
  "customer_email": "test@example.com",
  "customer_phone": "+15551234567",
  "service_type": "Deluxe Cut",
  "slot_datetime": "2026-06-15T14:00:00-05:00",
  "deposit_amount": 2500,
  "total_value": 10000
}
```

Appendix: Quick Reference Card

```
START:    Enable webhook + cron jobs in n8n
STOP:     Disable webhook + pause cron jobs
CHECK:    n8n execution log → look for reminder sends
FIX:      If emails failing: check SMTP credential in n8n
ESCALATE: If deposit collection fails → check Square API status
```
