1. Executive Summary

What It Does

Tracks each customer’s service cycle, predicts when they’re due for their next visit, and automatically sends a pre-filled booking link at the right time. Example: “Your last Deluxe Cut was 4 weeks ago — ready for your next one? Book with one click.”

Business Value

METRIC	BEFORE	AFTER (TARGET)
Repeat booking rate	Variable	+25%
Customer retention	Passive	Proactive
Booking friction	Full form every time	One-click rebook

2. System Architecture

Flow Diagram

```
Service Completed
  → Log to customer_history
  → Calculate predicted return date
  → Timer: predicted_date - 3 days
    → Send: "Ready for your next visit?" + pre-filled booking link
      → Customer clicks → Booking form pre-filled with:
        - Same service
        - Same provider (if available)
        - Preferred time slot
      → Booked? → Update cycle → Restart timer
      → Not booked? → Follow-up at predicted_date + 7 days
```

Service Cycles (Examples)

SERVICE	TYPICAL CYCLE	REMINDER WINDOW
Haircut	4 weeks	3 days before
Color/Treatment	6 weeks	5 days before
Massage	2 weeks	2 days before

SERVICE	TYPICAL CYCLE	REMINDER WINDOW
Cleaning	1 week	1 day before

3. Database Schema

```
CREATE TABLE customer_cycles (  
  customer_id TEXT,  
  service_type TEXT,  
  last_booking_date DATE,  
  typical_cycle_days INTEGER,  
  predicted_return_date DATE,  
  rebook_reminder_sent BOOLEAN DEFAULT FALSE,  
  rebooked BOOLEAN DEFAULT FALSE,  
  PRIMARY KEY (customer_id, service_type)  
);
```

4. Implementation Plan

PHASE	TASK	EST. EFFORT
1	Customer history tracking	2 hours
2	Cycle calculation algorithm	2 hours
3	Pre-filled booking link generation	3 hours
4	Reminder workflow (Cron + Email)	2 hours
5	Follow-up for non-rebooked	1 hour
Total		~10 hours

5. ROI Projection

ASSUMPTION	VALUE
Monthly customers	100
Rebooking rate increase	+25%
Average booking value	\$50
Additional monthly bookings	25
Monthly additional revenue	\$1,250
Annual additional revenue	\$15,000
