Upsell Intelligence Engine — Implementation Plan

Automation ID: upsell-intelligence

Version: 1.0

Status: Draft — Planning

Date: 2026-06-16

Builder: SOL / Assembly

1. Build Phases

Phase 1: Performance Tracking Database (2 hours)

Tasks:

1. Create upsell_performance table
2. Seed with existing upsell items

3. Initialize all counters at 0

Phase 2: Impression/Click/Conversion Logging (2 hours)

Tasks:

1. **Impression:** Log when upsell is displayed to customer
 2. **Click:** Log when customer clicks/taps upsell
 3. **Conversion:** Log when upsell is added to cart
 4. **Revenue:** Log upsell revenue on completed order
 5. All logging via n8n webhooks from frontend
-

Phase 3: Scoring Algorithm (2 hours)

Tasks:

1. Build scoring function in n8n Code node
2. Recalculate scores daily (cron)
3. Apply exploration boost for new items
4. Auto-flag low performers for review

```
// Daily score recalculation
for (const item of items) {
  const impressions = Math.max(item.impressions, 1);
  const conversionRate = item.conversions / impressions;
  const avgRevenue = item.revenue_cents / Math.max(item.conversions, 1);
  let score = conversionRate * (avgRevenue / 100);

  // Exploration boost for new items
  if (item.impressions < 100) {
    score *= 1.5;
  }

  // Status update
  if (item.impressions > 500 && conversionRate < 0.01) {
    item.status = 'hidden';
  } else if (item.impressions > 200 && conversionRate < 0.02) {
    item.status = 'low_priority';
  } else {
    item.status = 'active';
  }

  item.score = score;
}
```

Phase 4: Dynamic Ordering in Frontend (2 hours)

Tasks:

1. Frontend fetches upsell scores on page load
2. Sorts upsells by score (descending)
3. Top 3 displayed prominently

- 4. Hidden items not rendered
- 5. New items get “New!” badge during exploration period

Phase 5: A/B Testing Framework (2 hours)

Tasks:

- 1. Randomly assign customers to groups (A/B)
- 2. Group A: current ordering
- 3. Group B: experimental ordering
- 4. Track conversion rates per group
- 5. After statistical significance: promote winner

2. Timeline

PHASE	EST. HOURS
Phase 1	2
Phase 2	2
Phase 3	2
Phase 4	2
Phase 5	2
Total	10 hours (~2 weeks)

3. Success Metrics

METRIC	TARGET
Overall upsell conversion	> 20%
Average order value increase	+15-25%
Low-performer auto-detection	< 2% conversion flagged
A/B test velocity	1 test/month
